

Connecting for Biodiversity

Biodiversity and transformative change for plural and nature-positive societies

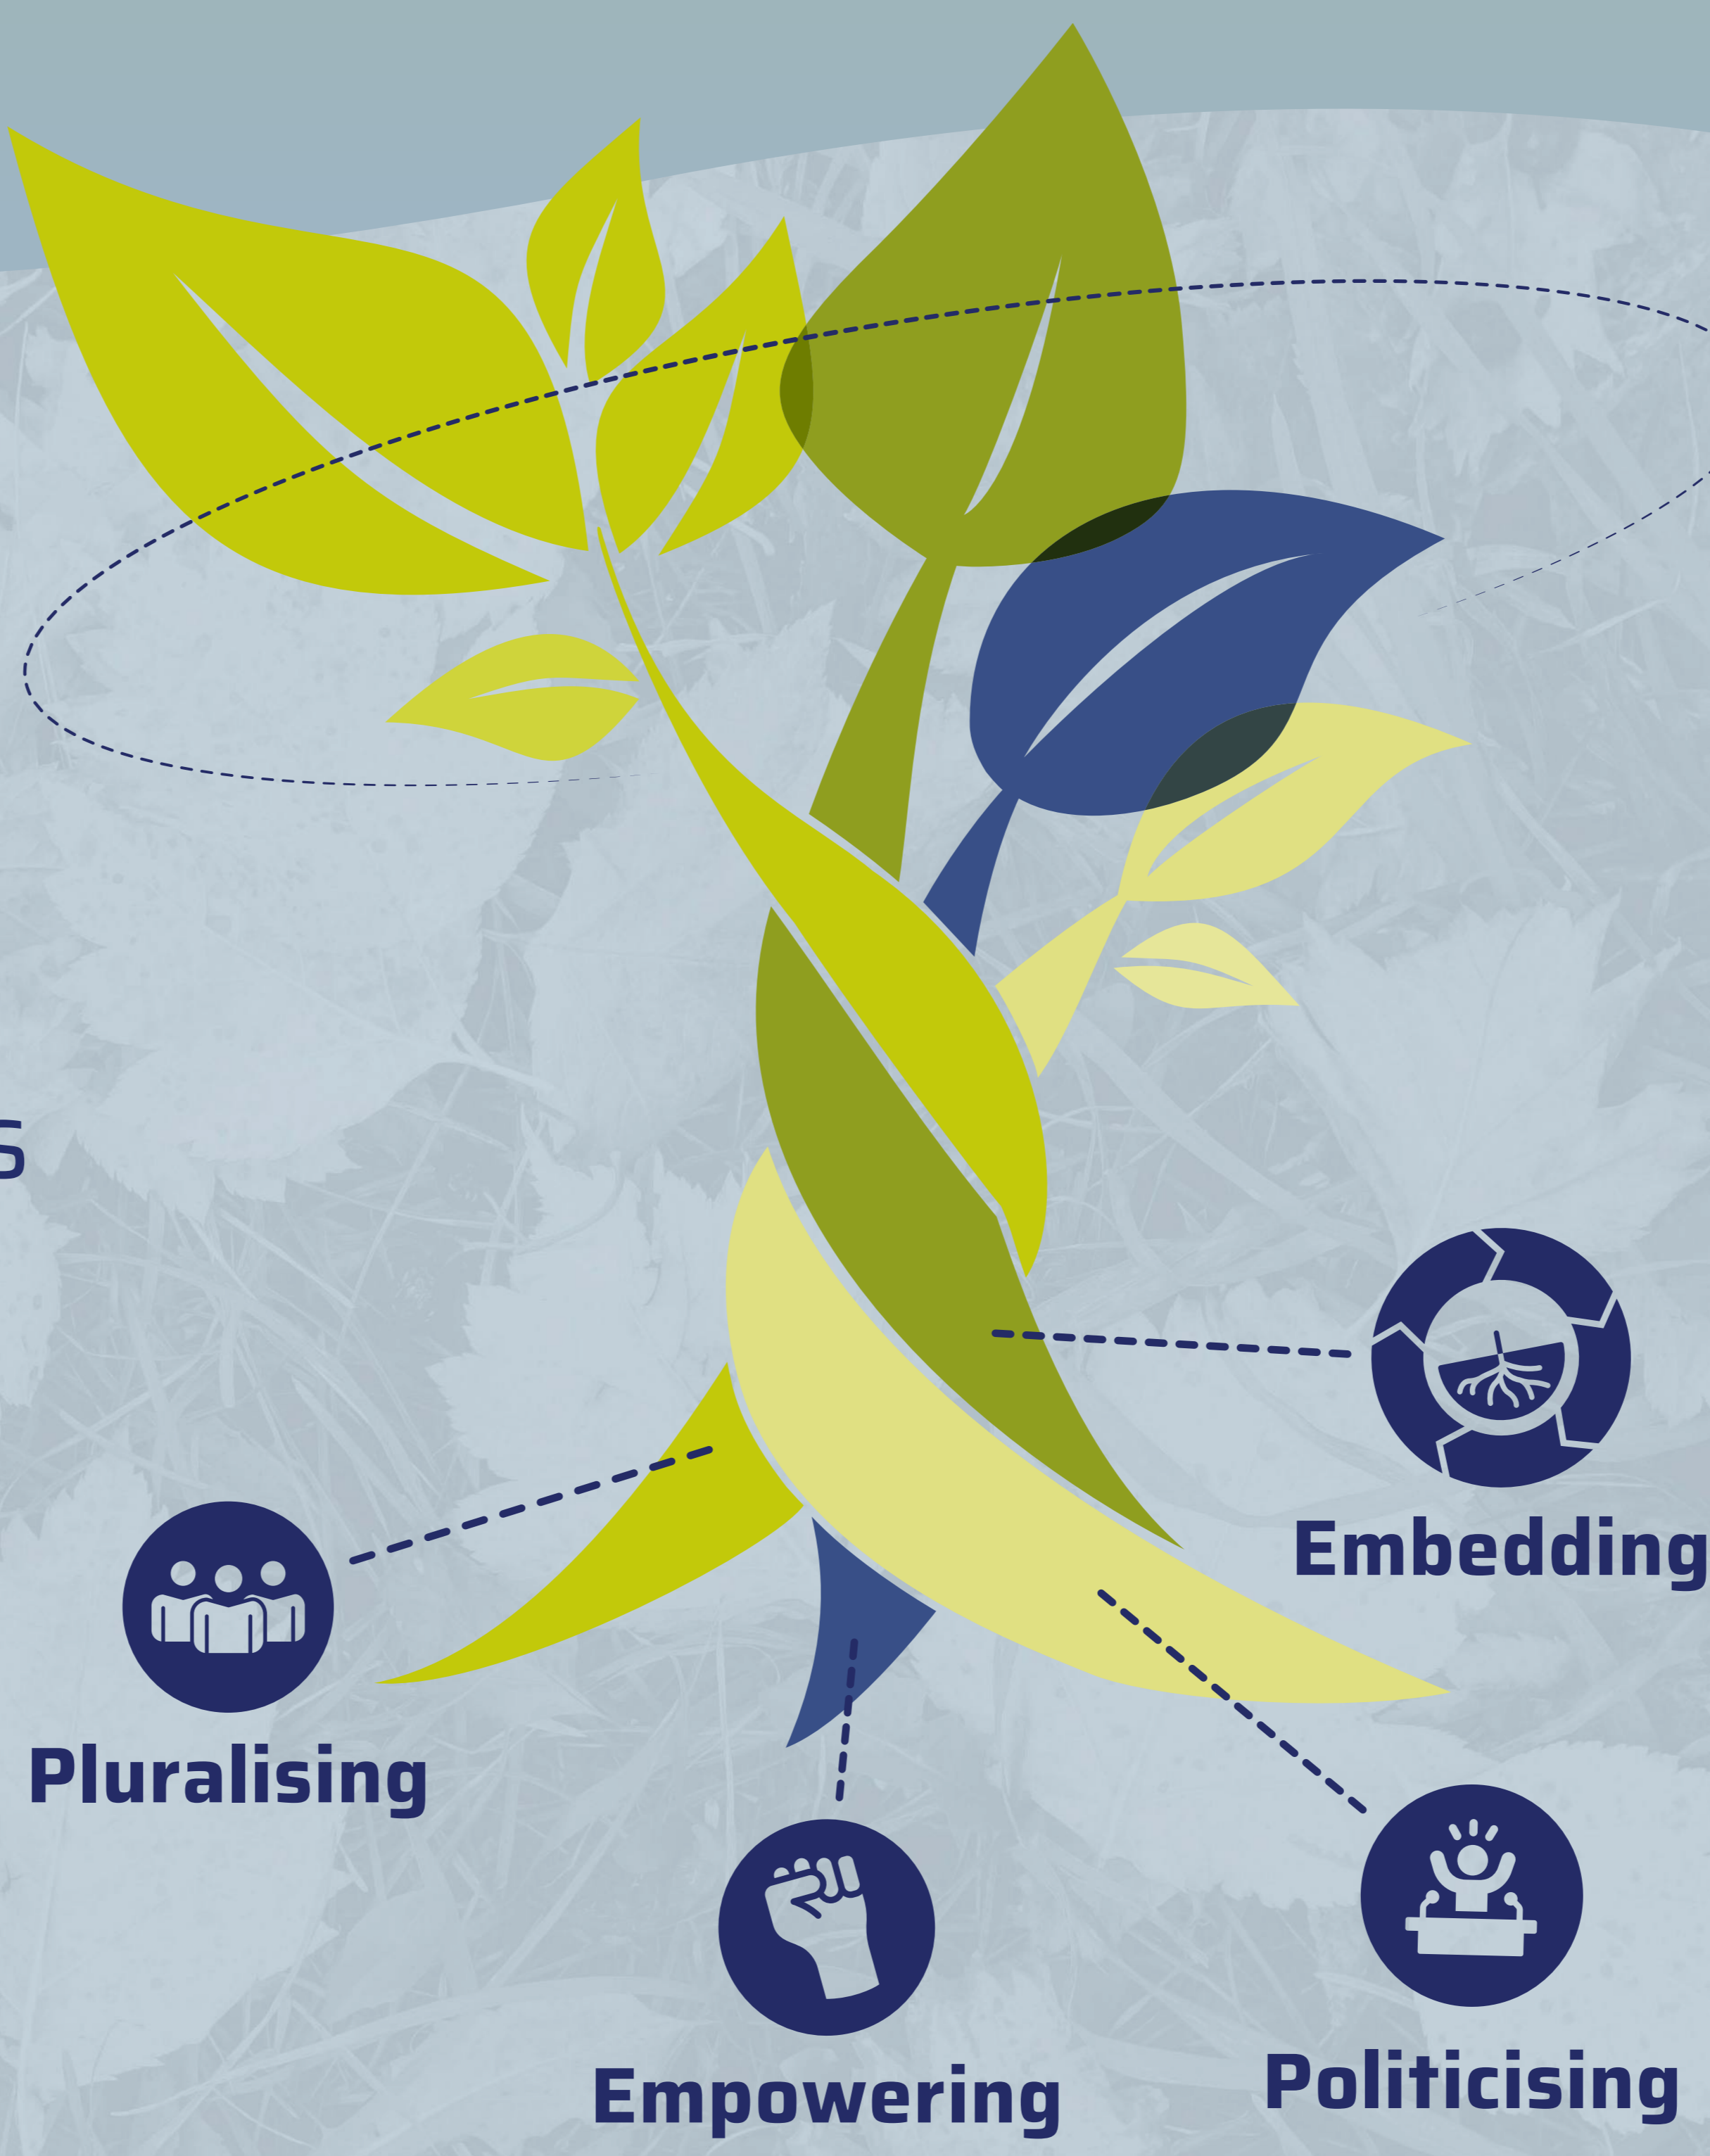

Our researchers will develop knowledge, tools and novel approaches towards a society in harmony with nature.

Our main goal is a nature-positive, inclusive society. We will collaborate with societal partners to explore nine European case studies. These cases encompass high-impact areas like agriculture and urbanisation. The findings will guide us in enhancing public policies, local and corporate strategies, fostering fairness. Our aim is to stimulate positive changes in actions and behaviours.

Our principles

We are guided by 4 principles for transformative change
